NIA knowledge corpus — what you retrieve from

This folder is the **only** factual source your avatar may use. The airport is fictional. If a traveler asks something that is not in these files, your avatar says it does not know.

What you do with these files

1. Read them. Gate C22, the prayer room, and lost-and-found are the demo facts.
2. Write an ingest script that indexes **only** the paths in `manifest.json` into ChromaDB.
3. Do **not** ingest `unknown_traps.json`. Use that file to test refusals.
4. Wire `search_airport(query)` to that index. Path A: Nova Sonic calls this tool. Path B: your code calls it after Wispr transcribes, before Kokoro speaks. Either way, no factual answer without this tool.

Hindi and Spanish pages translate the English facts. Do not add a gate, time, or phone number that is missing from the English files.

File	What it covers
`nia_airport/terminals.md`	T1 / T2 / T3, airlines, walking times
`nia_airport/gates.md`	Gate → terminal, food, last-call (includes **C22**)
`nia_airport/security.md`	Liquids, laptops, family lane — not visa law
`nia_airport/transport.md`	Metro, taxi, car park, hotel shuttle
`nia_airport/amenities.md`	Prayer room, medical, lost & found, wifi
`nia_airport/hours.md`	Desk hours, last metro, phones
`nia_airport/faq.md`	Short answers meant to be spoken
`nia_airport/hi/`	Hindi — same facts, not new facts
`nia_airport/es/`	Spanish — same facts, not new facts
`unknown_traps.json`	Questions your avatar must **refuse**
